

TASK 2

Name: Bharathidasan B

Mail-Id: bharathidasan9629@gmail.com

Task Title: To-Do App

Task Description: To develop a functional To-Do list App.

The goal is to design a user-friendly interface that allows users to manage their tasks seamlessly.

Steps Taken: Creating a simple HTML and CSS file for the To-Do list App. Developing a JavaScript file for the functionality of taking the input and displaying the tasks in the To-Do list. Creating function for deleting and marking a done for the tasks by using the local storage.

Challenges Faced: Creating function for the functionalities of deleting and making strikethrough the tasks. Creating a local storage.

Solutions Implemented: Created a local storage using Array. Using text-decoration I strike out the tasks in the list. For removing the elements in the list first I found the index and then used removed using splice.

Learnings: Learned how to create local storage. Functions like strikethrough and removing an element from the array.

Project Update: I Have created a Responsive Company Member Team Page, built a Landing Page, Now build a To-Do list App and eagerly waiting for task 4.
